## **Inspection and Test Protocol**

## I. General Procedures:

All items will be subjected to the following procedures, whichever is applicable:

- a. Evaluate the parameters of the goods as indicated in the specifications e.g., material, dimensions, capacity, power rating, etc. which can be found in the item's nameplate. All areas must conform to the technical specifications.
- b. Look for any evidence of defects such as, but not limited to, rust formation, broken parts, etc. that affects function or overall performance as a whole. All items must be free from defects;
- c. Check the completeness of parts/accessories;
- d. During the conduct of evaluation or inspection of the offered goods, the bidder supplier shall provide one or two technical representative/s, and the tools and materials needed listed below. The supplier/technical representative shall be responsible in the preparation and operation of the goods and assist the TWG in the conduct of the evaluation.

II. Detailed Inspection and Test Procedures:

•	Detailed Inspection and Test Pr	ocedures:
Item No.	Description	INSPECTION and TEST PROCEDURES
ot 1:	Bread and Pastry and Cookery E	quipment
		Functional Specifications:
1	Stand Mixer with Complete Attachment	Check functionality by doing three 5-minute test runs with the wire whisk and flat beater using 2 liters of water as medium. Check the variable speeds by switching from low to high speed. There must be a noticeable increase in the speed. Refer to the User's Manual provided. Equipment must function as intended. For the dough hook, proceed to protocol for performance specification.  Performance Specifications:  Equipment must be able to knead 1 kilogram of dough (minimum). Bidder will provide the ingredients (like flour, milk, butter, yeast, sugar, and salt) for a simple bread recipe such as pan de sal, cheese bread, etc. The resulting weight of the ingredients must be equal to 1 kilogram.  Design Specifications:  1. Perform visual inspection of the item;  2. Bidder must provide manufacturer's certification that the bowl material is Food-grade and made of stainless steel;  3. Use the contents of four 1-liter bottles of store-bought mineral water to check the bowl capacity. The water should not overflow from the bowl;  4. Look for the Rated Power on the "nameplate". Doublecheck by measuring the amperage while performing the performance specification protocol using the Clamp Meter. Compute for the wattage using the formula: Watts (W) = Amps (A) x Volts (V)  5. Look for the voltage rating in the "nameplate". Perform visual inspection of the power cord and plug to determine the type A plug or plug adapter;  6. Perform visual inspection of the selector knob/switch. At least 3 speed settings must be indicated;  8. Check the contents of the User's Manual. Needed tools and materials: Clamp Meter, tape rule, ingredients (like flour, milk, butter, yeast, sugar, and salt) for a simple bread recipe such as pan de sal, cheese bread. etc.
2	Decker Oven	Functionality/Performance  1. Administer mandatory functionality testing based on the operating instructions. The following tests are as follows:  a. Ignition system test, b. Gas leak test of LPG regulator and hose using soap and water

		2. Execute endurance testing for a series of five test runs for one minute each to determine how the equipment
		and have a leak test on the LPG regulator and hose using soap and water
		the operating instructions as follows: Turn on the gas
		Functionality test:  1. administer mandatory functionality testing based on
		(from the stand mixer performance test), tape rule
		of flour use for testing  Needed tools and materials: 1 kilo freshly mixed dough
	1 1 1 2	in dough load testing and provide dough at least 5 kilos
		Load testing  4. The supplier should perform the actual demonstration
		machine behaves under sustained use.
	- Dough Note:	runs with one minute each to determine how the
4	Mechanical Dough Roller	bearing 3. Execute endurance testing for a series of five test
		abnormalities, sparks, and irregular noise in motor
	47.0.3	2. Monitor the motor, it must be without any
	72.40	operating procedure to determine that it is fully serviceable
		the machine for fifteen minutes based on the specified
		Administer mandatory functional testing by running
		water, rugs (shall be provided by the Bidder during test)  Functionality/Performance
	7 2 br-	micrometer/Vernier caliper, infrared thermometer, soap,
		Needed tools and materials: tape rule,
		on how to use and provide any kitchen utensil and raw materials for cooking test.
	6 1	5. The supplier should perform the actual demonstration
	- 11	Load testing:
	4, 1	to at least 250 degrees centigrade.
		4. Measure the temperature of the oven by using the infrared thermometer to verify Temperature range from 0
3	Gas range w/ oven, 4 burner	irregular noise
3	Goo range w/ even 4 house	3. Monitor the machine without any abnormalities and
		of five test runs for one minute each to determine how the equipment behaves under sustained use
	41 11 1	2. execute endurance testing in every burner for a series
		water
		a. Automatic electronic Ignition system test,     b. Gas leak test of LPG regulator and hose using soap and
	. 116	follows:
		the operating instructions. The following tests are as

		degrees centigrade using infrared thermometer relative
		behaves under sustained use.  3. Verify oven Temperature range from 0 to at least 350
		for one minute each to determine how the equipment behaves under sustained use.

		from the following:
	1	a) breakage, rusts, dust
		b) abnormalities of removable attachments like shelf,
		crisper and other storage that may be attached on
		doors.
		Performance Specifications
		1. Place the wired probe of the thermometer in the
		freezer; let a supplier technical representative run the
		refrigerator for several hours within a day to verify its ability to attain -18°C or lower temperature.
	I.	2. Check and verify the quality marks affixed on the refrigerate
		(e.g. (PS) Quality and/or PS Safety Mark, ICC) or PS license of
		the brand and model.
	1	Design Specifications
	1	Verify each item of the design specification
	1	correspondingly the following:
		Refer to manufacturer specification, conduct visual
		and functional checks;
		2. Refer to manufacturer specification;
	1	3. Refer to manufacturer specification;
		4. Refer to manufacturer specification and conduct test
		run;
	1	<ul><li>5. Conduct visual check and test run;</li><li>6. Refer to manufacturer specification;</li></ul>
	1	7. Refer to manufacturer specification;
	1	8. Check inclusion of Warranty Card bearing at least the
		required limits;
		9. Check manual's language used, content, illustration
		and compatibility with the item;
		10. Verify tatus of service centers in the list provided by the
		supplier.
		Tools and Materials Needed: tape rule, thermometer with
		wired probe, VAC meter, pc/cellphone, internet
_		connection, 220-240V mains.
		Functional Specifications Check usability (that includes the body, door and
		compartment together with its accessories) from the
		following:
		a) breakage, rusts, dust
		b) function abnormalities of removable attachments like
		shelf and other storage/holders that may be included
		with the item.
		Performance Specifications
		1. Place the wired probe of the thermometer in the
		freezer compartment; let a supplier technical
		representative run the refrigerator for several hours
		within a day to verify its ability to attain -18°C or lower
		temperature.
		<ol><li>Quality marks affixed on the refrigerator (e.g. PS, ICC, CCC and the like) and or copy of certification to be</li></ol>
		provided by the supplier (e.g. PS license, ISO 9001 and
2		the like).
		Design Specifications
	Hariaht Passes	Verify each item of the design specification
	Upright Freezer	correspondingly the following:
		1. Refer to manufacturer specification, conduct visual
		and functional checks;
		2. Refer to manufacturer specification;
		Refer to manufacturer specification;
		Refer to manufacturer specification and conduct test
		run;
		<ul><li>5. Conduct visual check and test run;</li><li>6. Refer to manufacturer specification;</li></ul>
		7. Refer to manufacturer specification;
		8. Check inclusion of Warranty Card bearing at least the
		required limits;
		9. Check manual's language used, content, illustration
		and compatibility with the item;
		10. Refer to the list of service centers provided by the
		supplier and conduct verification of their status.
		Tools and Materials Needed: tape rule, thermometer with
		wired probe, VAC meter, pc/cellphone, internet
		connection, 220-240V mains.
		T.

	r	
		The approved technical specification shall be used to check the
		<ul> <li>conformity of the results in this test</li> <li>Turn on the laptop using battery power</li> </ul>
		The laptop must already have pre-installed Microsoft
		Windows 10 or 11 operating system
		Connect to the internet via Wi-Fi
		Check the systems information using the following:
		Windows built in: Start Button -> Settings -> System -
		> About
		Third-party hardware profiling softwares(free version):
		CPU-Z and HWiNFO
		Take note of the Processor's brand and model then
		using any built-in web browser go to the processor's brand
		official website and search for the model and check for its
		advertised core counts, number of threads, base speed, turbo
		speed and launch date
	-	Double check if the website's information of the
		processor matched the information shown in the windows built-
	100	in and third-party hardware profiling software
		Using the same systems information check the
		memory, storage and graphics.
		Navigate to Start Button -> Settings -> System ->
		Display and check for the display resolution
		Measure the screen size using a ruler/meter tape
	1	Open the windows built-in camera application then
1	Laptop Computer	record and play back at least 5 seconds video.
1	Daptop Computer	Open the windows built-in voice recorder application
	1	then record an audio test (at least 3 seconds each) using the
		built-in microphone and external microphone
		Play back the two recorded audio using the
	- 1 11	loudspeaker and headphone
		Open any text editor then test each keys in the
		keyboard
		Check the touch/track pad, the left and right clicks.
		Copy file/s from and to a USB flash drive using each
		of the USB A ports available
		Connect to an external display using the external
		display port
		Navigate to Start Button -> Device Manage -> Security
		Devices then check for the Trusted Platform Module (TPM) 2.0
		Connect the laptop charger then check for charging
		indicators
		natottoro
		Inspection and Testing Tools and Equipment Needed:
		Internet Connection
		CPU-Z and HWiNFO installers
		Ruler/Meter Tape
		3.5mm jack headphones with microphone
		USB Flash Drive with files
		Appropriate external display cable (to be provided by
		the bidder)
		The approved technical specification shall be used to check the
		conformity of the results in this test
		Prior to the inspection the printer should have been
		already initialized and installed to a Windows PC/Laptop
		Connect to a Windows PC/Laptop via USB
		Check the highest printing resolution and test print an
		image file using that highest resolution settings
		Scan any document as image/JPG to a Windows
		PC/Laptop using the highest scan resolution then check for the
		image resolution in the File properties -> Details
		Check the print speed and highest copy resolution in
2	Printer	the printer's brand/model official website, brochure, and other
		literature.
		Fit a standard A4 size paper in the flatbed
		• Fit 100 sheets of A4/64 gsm paper into the input tray
		• Fit 30 cheete of A4/64 gem paper into the output trav

Conduct material testing for stainless steel. To determine whether the material is stainless steel 304, use a magnet. The magnet shall not attract the material used. 2. Assemble the cabinet. 3. Fastened joints using rivets and bolts with nuts. 4. Count/measure the number of holes for rivets, the size and the bolts with nuts. 5. Do the dimensional inspection of the assembly. Measure the height, width, depth, length. 6. Inspect the doors gap with respect to the frame, the thickness of the transparent Flexi-glass (acrylic), and the presence of the rubber linings. 7. Inspect the functionality of the three-way door lock and its keys, door handles, and hinges if it is complying with the technical specifications. 8. Spot welded surface must be properly polish. 9. Check the uprightness of the assembly when laid on a flat surface. 10. Check the alignment of the holes (for the detachable shelve support) both vertically and horizontally. 11. Render product stability, rigidity, and durability by placing a weight on the top surface of the shelves of at least 50 kg. If it "FAILS", it will be the basis for the rejection of the item. 12. The assembled cabinet will be subjected to stress test by
	Cabinet, Design 2 (Condiment	Ethernet Cable Wi-Fi router with ethernet ports Smartphone or other Bluetooth control device  1. Conduct material testing for stainless steel.
